SUBJECT : Revised Procedure for Handling PCBs at Georgetown

On March 1, I met with Construction Engineering staff and the contractor and subcontractor for handling PCBs and tanks from Georgetown. We discussed the two different procedures submitted by the contractor (February 5 and February 16), and the problem with the second procedure in regard to the oil or sludge with 8 ppm PCB.

I will approve the second procedure (dated February 16) so long as the "Tank Emptying" and "Drum Filling" sections from the first procedure (February 5) are substituted for the "Tank Emptying" portion of the second procedure (dated February 16). Please have this change made.

I have also completed and signed four Waste Profile Questionnaires for submittal to Envirosafe Services of Idaho, and hand carried them to you on March 2. Let me know if there are any questions on these.

Please keep me informed of the progress on this matter. Thank you.
